

What You Need

To follow along with this book, you'll need the following:

- **IntelliJ IDEA Community Edition 2020.3.2 or later**, available at <https://www.jetbrains.com/idea/>. This is the environment in which you'll develop the sample code in this book.
- **Kotlin Plugin for IntelliJ IDEA v1.4.20 or later**, installed (if not included by default) by going to IntelliJ IDEA **Preferences** on macOS (or **Settings** on Windows/Linux) and choosing **Plugins**, then searching on "Kotlin".
- **Java SE Development Kit 8 or later**. Most of the code in this book will be run on the **Java Virtual Machine** or **JVM**, for which you need a **Java Development Kit** or **JDK**. The JDK can be downloaded from Oracle at <http://www.oracle.com/technetwork/java/javase/downloads/index.html>.
- In Chapters 24 and 25, you'll have the option of using a text editor such as **Visual Studio Code** instead of IntelliJ IDEA.
- In Chapter 26, in place of IntelliJ IDEA, you'll use **Android Studio 4.1** or later and **Xcode 12.4** or later to build a Kotlin Multiplatform app.

If you haven't installed the latest versions of IntelliJ IDEA Community Edition, the Kotlin Plugin, and JDK 8, be sure to do that before continuing with the book. Chapter 1: "Your Kotlin Development Environment" will show you how to get started with IntelliJ IDEA to run Kotlin code on the JVM.
